Thesis

“A thesis is a complicated word with more meanings that you think. Being a student, I would like to define this word from the academic aspect. I will offer all the official meanings of this word. Finally, I will conclude by providing my own understanding of this term.

According to the Cambridge University Press dictionary, the official meaning of the word may sound like, “the fundamental idea or theory of an individual, a team of people, written piece, or speech.” That is the primary meaning. They do provide another one. “A thesis is a long piece of writing on a specific question, especially one that is prepared to gain a college or university degree.” The 2nd interpretation is popular among students and academics.

To me, a thesis is a complex assignment. When I hear this word, a lengthy paper written on the specific research question comes to my mind. An example could be a thesis we had to write to pass our college history course. In an academic sense, the word “thesis” has more than one meaning too. It can refer to a sentence or two that comprise the main idea to defend in a written piece or a separate paper, thesis proposal, written as the part of the entire dissertation.

In philosophy class, we have covered a different meaning of this term. The teacher explained that a thesis is an ancient word referring to a theory or idea that has to be defended.
