Dear Admission Officer,

As a youngster, I had an obsession with flying. I observed birds flying for hours, noticing how their wing angles influenced their travel routes. To my parents' chagrin, I would then spend a ton of brand-new cardstock making paper aircraft to experiment with different wing designs.

My passion peaked one day, and I chose to fly. When I was five years old, I constructed an airplane using a wooden clothes hanger, sheets, and garbage bags as emergency parachute materials. As I got older, my innate urge for problem-solving allowed my one and only passion for flying to transform into a lifelong love of engineering.

I started pushing my academic limits by enrolling in the most difficult science classes. This gave me a chance to complete all of the science courses by the end of my sophomore year and to interact with the smartest students in the levels above me, providing me access to the breakthrough research they were carrying out.

I spent most of my days attempting to understand why things were occurring and concurrently seeking solutions to prominent issues. I am fascinated by engineering's capacity to consistently provide better solutions to each problem in a society that increasingly values a single solution.

As one of your students, I am confident that, with the help of your resources, I can be successful in whatever future pursuits I may undertake.

Thank you for your time and consideration.
Best regards,
